Profile

Highly motivated and detail-oriented Production Support Engineer with 3+ years of experience in application monitoring, incident management, and performance optimization. Proficient in Dynatrace, Azure App Services, and log analytics using KQL, with a strong foundation in Python scripting for automation. Adept at resolving production issues, enhancing observability, and collaborating with cross-functional teams to ensure high availability and reliability of enterprise applications.

Experience

- Ericsson Global Limited, Bangalore** Aug 2023 - Present - Software Engineer
 - Monitored application health and performance using Dynatrace, configuring custom alerts for failure rates, response time, and low traffic conditions.
 - Investigated issues across distributed systems using Dynatrace PurePath tracing to identify root causes and reduce MTTR.
 - Automated ticket categorization using Python scripts to classify incidents based on action plans and action owners, improving triage efficiency.
 - Analyzed logs and performance metrics using Azure Log Analytics and KQL, enabling faster resolution of application-level issues.
 - Configured Azure App Services monitoring for memory, CPU utilization, and response latency, setting alert rules for proactive support.
 - Developed and maintained real-time monitoring dashboards to visualize service availability and application health metrics..
 - Reproduced critical production issues in non-prod environments to assist in root cause analysis and validate fixes before release, ensuring higher stability and faster resolution.
 - performed UAT during release and patch windows to validate fixes, ensure application stability, and minimize post-deployment issues
 - Collaborated with development, and QA teams to ensure smooth deployments and issue-free production rollouts.
 - Created a Power BI dashboard to visualize the pre- and post-release impact on ticket volume and frequency, enabling data-driven analysis of release stability and identifying high-impact areas for improvement.
 - Participated in on-call rotation to provide 24x7 production support.
- Wipro Limited, Bengaluru** November 2021 - July 2023 Project Engineer
 - Provides **software support or technical support** services typically in a defined moderately complex project.
 - Monitoring the **batch jobs** of application.
 - Experienced in ticketing tool **Service now** by helping users in **retrieving access/granting access, user changing management**.
 - Supported the user with business data management in **Oracle SQL developer**.
 - Addressed technical issues and guided end users through resolution.
 - Analyzed all the complex issues and resolved them within the SLA.
 - Solved tier 1 and tier 2 problems without needing to escalate to tier 3 support Engineer.

Education

- B.S Abdur Rahman crescent institute of science and technology, Chennai.** 2021
B.Tech Mechanical engineering
8.3 CGPA

Technical Skills

- **Monitoring & Observability:** Dynatrace (PurePath, Distributed Tracing), Azure Monitor, Azure App Services, Application Insights, DataDog

Log Analytics: Azure Log Analytics, Kusto Query Language (KQL)

Languages & Automation: Python, JavaScript

Query Languages: SQL, CosmosDB, Azure SQL Server

Incident Management: ServiceNow, Freshservice,

Enterprise Software: MS Suite(Excel, PowerPoint), PowerBI

API: Postman

Platforms: Windows, Linux

Projects

- **Automated Ticket Categorization Tool**

Built a Python-based script to read ticket metadata and assign categories and owners automatically.

- **Release Impact Analysis Dashboard - Power BI**

Designed and developed a Power BI dashboard to analyze the pre- and post-release impact on support ticket volume and frequency. The dashboard provided visual insights into trends, anomalies, and recurring issues after production deployments. Data was sourced from ticketing tools (e.g., Freshservice).

Key Highlights:

- Used DAX for dynamic calculations of ticket trends over release cycles.
- Incorporated filters for application modules, ticket categories, and release windows.
- Helped reduce release-related incidents by identifying frequent failure points in post-deployment phases.

Achievements & Awards

- Business English Cambridge Preliminary
- Certified in Microsoft: Azure Fundamentals AZ-900
- Certified in Microsoft: Azure Data Fundamentals DP-900
